

MESSAGE

"TMC who initiates a bright future. For PROLONGING LIFE OF PLANET EARTH"

Japan doesn't have mineral resources, but Japan is one of the leading urban mining countries in the world.

It is necessary for use the resources of urban mining is recycling technology.

Fortunately, TMC has recycling technology that we have accumulated since our founding. The recycling technology is packed with the necessary elements that the entire planet is aiming for.

We will not only inherit the technology, but also add value that fit with the times, develop technology that is friendly to both people and the environment, and develop businesses that only we can do.

In addition, everything is becoming more automated, and artificial intelligence is making remarkable progress.

But isn't there something that only people can do?

I think that I want to have an intimate relationship with customers, partner companies, and employees.

We will inherit the trust and achievements built up by our predecessors and we will continue to be a company that solves social issues in response to rapid environmental changes with a flexible attitude.

CEO Hiroshi Miyawaki

"TMC achieves success with advanced technology and competitive positioning"

In 1986,TMC was started in Osaka, Japan. TMC has continued to grow in the field of resources. In addition, TMC has been recognized as a leading company working for the global environment through the recycling of nonferrous metals including rare metals in compliance with social requirements in the environment.

TMC is diming to work as world-class recycling company through excellent management practices in the areas of QC and its participation in maintaining environmental standards. TMC is also committed ideology for global survival through R/D.

HISTORY

"Now TMC aims to be reborn as a global recycling company, aspiring to become the world-best."

2018 04	Opened "Toyama Plant"	2005 11	Established TMC CHINA
	"MR"name changed from "MR" to "Takaoka Plant".	2002 12	Obtained ISO 9001
2018 03 2017 08 2015 04	Established Advanced Material Department Merged TMCMR Co.,Ltd. ,and Opened "MR". Opened " Shigaraki Plant "	2002 08 2001 04	Increased capital up to 80,250,000 yen Increased capital up to 60,000,000 yen Started Electrolyzing of Cobalt [Reclaim of high-purity cobalt metal]
2014 04	Moved to Kyoto	2000 12	Obtained ISO 9002
2012 03	SiX (Silicon Powder) project is launched	2000 10	Opened IT Center in Shiga Pref
2011 02	TMC 's proposal has been adopted as "Subsidy Business",	1998 10	Opened Solar Material division
	The Ministry of Economy,Trade and Industry was offering	1998 10	Established TMC KOREA
2010 01	Installed Carbonization Furnace at Mother Plant	1996 04	Established Notogawa Weighing Center Co.,Ltd.
2009 05	All plant facilities concerned with TMC have been integrated to	1996 04	Opened Notogawa plant in Shiga Pref
	Mother Plant	1995 09	Opened Titanium Division in Shiga Pref
2009 05	Opened " Mother Plant "with a state of the laboratory	1994 08	Opened Distribution center in Shiga Pref
2007 10	Increased capital to 95,250,000 yen	1988 09	Moved to Higashi-Osaka and Organized Corporation
2006 09	Separate Electrolysis Division , established TMCMR Co.,Ltd.		with a capital of 30,000,000 yen
2006 01	Opend TOKYO BRANCH	1986 03	Started doing business in Osaka City

"Business base"

Mother Plant

"Has revived as a raw material in the mother plant quality is trusted"

thorough quality control, aiming to consolidate in one place the work efficiency, and each plant was in Shiga Prefecture in May 2009, Having a site of about 26,400 square meters, our company started as a mother plant exactly.

Secondary battery (Li-ion \cdot MH) scrap, solar cell-related scrap, nickel, cobalt, titanium, tungsten Emissions such as handling huge yards, a rare metal, making full use of analytical instruments, equipment, machinery of various control signals to suppliers I have recycled as raw material quality, which is reliability.

"Business base" Shigaraki Plant

With increase in quantity of handling, we opened a plant in the same city as a satellite plant of Mother Plant.

It occupies a land area of approx. 6,600 square meters

and it's a good location in 3 minutes access from Shigaraki IC (interchange) at the New Meishin-Expressway.

"Metal recycling ensures repeated use of a valuable raw material"

"Create the business of recycling rare metal resources"

TMC understands client's needs changing from day to day and contributes to society as much as obtains satisfaction from both our suppliers and customers by recycling rare metal bearing scraps as rare metal resources, using our original know-how based on the knowledge and wisdom with forethought.

Continuing the research development of high recycling technology by staff with deep expertise and the renewal of the safe and efficient machinery equipment for recovery, we are creating rare metal recycling business by our thoroughgoing quality control and customer service. In recent years, we have been focusing on the production of recycled lithium carbonate mainly at the Takaoka Plant and Toyama Plant.

Recycled lithium carbonate

Ni scrap

Co scrap

Ti scrap

Packing and shipping

"Production of high quality cobalt hydroxide from scrap-Sole technology TMC developed / TMC Korea"

"TMC practices quality control management"

We obtained ISO 9001 on December 12, 2002 and have been trying to improve the quality control system.

In our laboratory, specialist staff has been developing recycling technologies for environment and for metal scraps from new field. Under the slogan of our quality policy "Sustainable Solutions for the Earth", we would hope co-existing between people, living and nature.

"We are creating Rare Metal Recycling Business"

TMC mainly deals with scraps of nonferrous metals generated from almost all the industrial sites such as electrical, electronic, chemical, aerospace, and mechanical plants.

TMC produces value-added nonferrous metals from scrap generated various sources such as the secondary battery(Li-ion,Li-polymer,MH),super alloy, semiconductor, spent catalysts, samarium-cobalt magnet, titanium, zirconium, molybdenium, and other relevant materials.

The value-added products are utilized in broad areas from chemical to aerospace industries.
